

OXY PROBIOTICS™

Liquid Aquaculture Products

O₂

**Oxygenate Your Pond Water!
Boost Fish and Shrimp Production!
Improve Yields & Profits!**

OXY-POND™ is a rich source of probiotics and Oxygen Releasing Enzymes that release oxygen into the water! Use with, or without, mechanical aeration systems to improve oxygen levels for growing healthier fish and shrimp.

OXY-TERRA™ is a pond-bottom pretreatment formula that contains probiotics and a concentrated blend of organic acids, enzymes and bio-nutrients designed to stimulate and feed aerobic bacteria in the pond bottom soil. Stimulates aerobic bacteria to break down sludge, proteins, fecal coliform and fasses. Helps reduce unwanted E-coli.

OXY-HATCH™ is a formulation of concentrated probiotics, organic water stabilizers, and Oxygen Releasing Enzymes specially blended to protect tender young fish and shrimp during the hatchery stage. Also helps to build disease resistance and hasten earlier maturity.

- ✓ Improves Oxygen Levels
- ✓ Probiotics Help Digestion
- ✓ Better Feed Conversion Rate (FCR)
- ✓ Aids Earlier Maturation in the Hatchery Stage
- ✓ Promotes Uniform Growth

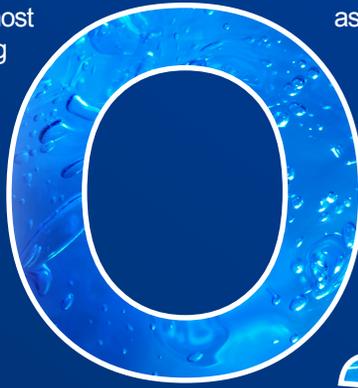

- ✓ Greater Inhibition of Pathogens & Disease
- ✓ Reduces Pond Transfer Shock
- ✓ Faster Break-Down of Pond Bottom Sludge
- ✓ Reduces Environmental Stress
- ✓ Reduces Mortality Rate

Probiotics: Bacillus Subtilis (Natto) and L. Acidophilus – Reduce Stress – Improve Digestion – Increase Your Profits

OXY PROBIOTICS™ – An Investment in Pond Success!

Aquatic scientists agree that the toxicity found in most ponds stems from a lack of oxygen. Ponds lacking adequate oxygen are known as *anaerobic*, while ponds with adequate oxygen are referred to as *aerobic*. Bad odors and ammonia are the first indicators that the pond is *anaerobic* or sick. Therefore, many aqua-farmers mechanically aerate their ponds, often 24 hours a day using pumps or paddles that stir air into the water... but this practice is very costly and may not fully solve the problem!

as overall water quality improves. Also, your ponds biological activity will begin to become more conducive to fish and shrimp health.

Numerous trials and university studies have proven the effectiveness of **OXY PROBIOTICS™** in a variety of ponds.

2

OXY PROBIOTICS™ brings a new approach to improving soil and water oxygenation. Our dynamic enzyme technology naturally releases elemental oxygen right into your soil and pond water! This action creates a more aerobic environment that helps your fish and shrimp grow healthier, faster and more disease-free!

When using **OXY PROBIOTICS™**, oxygen levels rise and *anaerobic* conditions usually disappear within days, sludge begins to break-down faster and feed efficiency improves

Use **OXY PROBIOTICS™** with or without mechanical aeration systems to improve oxygen levels for growing healthier fish and shrimp.

OXY PROBIOTICS™ is a concentrated probiotic and enzyme blend specifically designed for all phases of aquaculture.

Our liquid products are available in:

- 10 Liter Jugs / 10.31 kg (2.64 gal / 22.72 lbs) (2 per Case)
- 20 Liter Pails / 20.61 kg (5.28 gal / 45.44 lbs)
- 208 Liter Drums / 214.35 kg (54.95 gal / 472.55 lbs)
- 1040 Liter Totes / 1071.73 kg (274.74 gal / 2362.75 lbs)
- 1250 Liter Totes / 1288.02 kg (330 gal / 2840 lbs)
