

Biofeed[®]

FERTIGATION SERVICES

TOP REASONS FOR FERTIGATION SERVICES

Save Water!

Biofeed customers report reduced water usage of 30 to 40%. The Biofeed® ACT® base additive contains natural chelates which buffer and combine with harmful salt to make it soluble. The salt toxicity reduces as it becomes easier for salt to leach away from the root-zone. The removal of excess salt loosens the soil structure to allow better movement of water. Better soil structure reduces water usage in several ways while also creating healthier, more beautiful plants, trees, and grass. Reduce water, reduce cost!

Affordable & Automatic Plant Care

Automatic fertigation saves labor. With a small capital investment fertilizing is done each time you irrigate so there is no manual application expense or hassle.

Ensure the Proper Amount of Fertilizing

Take the guesswork out of plant nutrition and soil care. Automatic fertigation systems are safe, because fertilizing in such small amounts means no worries about overfeeding, burning plants, or having to restrict public access.

Stop Replacing Dead or Dying Plants

HOAs put a lot of planning, cost, and installation into their landscape master plan. One of the biggest expenses after installation is having to replace plant inventory. Both HOA and individual clients can protect their investment on trees, plants, flowers and lawns with fertigation services and the right balance of water, nutrients, and soil conditioners.

Expand Your Services and Income

For an HOA, fertigation services are indispensable. For clients it is a preferred method. Provide this regular service to your clients and enjoy the additional income. Biofeed® has proven the model and we can show you how.

Award-Winning Landscapes

Ultimately, landscape is about looking out the window, driving up, or taking a walk and enjoying the **GREEN**. Biofeed managed landscapes win awards. Even without awards, you can WIN the delight of your clients and their repeat business!

TURNKEY FERTIGATION SYSTEMS

Affordable and Automatic Total Soil and Plant Health Care

If your HOA or client's landscape already has an automatic fertilizer injector system installed - you can service it! If not, offer the affordable BioFeeder E-50 Series Automatic Injection System which includes our installation service that takes care of everything from installing the liquid fertilizer storage tank(s), flow sensors to the injection controller, and pump. We'll spec the exact system to suit your needs, then install everything required to set you up with a complete, fully operational, professional series BioFeeder E-50 liquid injection system, ready to use. This way, there's no guesswork. And you'll be assured of a professional installation, guaranteed by the industry's leading experts.

Monthly System Maintenance and Replenishment

At the heart of a program is a Monthly System Maintenance and Replenishment service. With it, your client's plants, trees, flowers, and soil will be in good hands and you clients know exactly what their monthly expenses will be to better balance their annual budget. You client's guesswork and worries – gone!

As part of a scheduled monthly refill service, your technicians top off the injector system tank with our Biofeed soil building fertilizers from a specially equipped tank truck, then you test the system thoroughly, recalibrate the injection pump if necessary and perform routine maintenance. It's fast, efficient, hands-off and worry-free for your clients.

To ensure you are adding the right nutrition, your Monthly Replenishment and Maintenance Service should include comprehensive soil or plant analysis. Once or twice a year, take soil or plant tissue samples in for laboratory analysis and provide your client with a written report of the results. Then work with your Biofeed account representative to select the proper Biofeed blend and adjust mixture ratios to maintain healthy landscapes in top-green condition!

Goals For Your HOA Clients

Align your HOA properties with a plant health care service provider they can trust.

Empower your landscapers to do what they do best – landscape maintenance.

Protect your client's big investments on trees, plants, flowers, lawns and water!

BIOFEEDER™ SYSTEMS SIMPLY MAKE SENSE

The automatic landscape feeding concept comes full circle with our BioFeeder E-50 series automatic injector systems. By micro-feeding, there's no plant shock that often happens with irregular chemical applications. Convenient, rugged, and cost-effective, teamed with Biofeed liquid fertilizers these systems are also highly efficient.

BIOFEEDER™ AUTOMATIC FERTILIZER INJECTION SYSTEMS

Our top-of-the line BioFeeder E-50 automatic fertilizer injection system is the ideal choice for small to large HOA landscapes and parks. Designed for either above or below-ground installation, an electronic flow sensor measures the amount of water flow in the main line, precisely and automatically adjusting preset liquid fertilizer mixture rates. BioFeeder E-50 comes with a nutrient storage tank available in 30 to 1,000-gallon sizes and a tough, vandal-resistant lockable safety cabinet, proportional flow sensor, built-in computer decoder, injection pump and injector fittings.

BIOFEED® ENZYME-BASED LIQUID FERTILIZERS WITH AMINO-CARBON TECHNOLOGY® (ACT)

Biofeed fertilizers contain our exclusive Amino-Carbon Technology® (ACT) which is a unique blend of natural organic acids, enzymes, amino acids, bio stimulants, minerals and plant nutrients that help build the soil's natural biological systems, which in turn enhances the growth of aerobic microbes, improving soil structure and natural fertility. These processes also digest thatch and black layers in turf and other modified soils. Soils rich in organics absorb and retain water more efficiently while buffering and reducing harmful salts and toxins that accumulate after years of chemical abuse and hard water.

Completely non-toxic and environmentally safe, Biofeed fertilizers are specially formulated to condition and activate soils biologically, providing salt and mineral management and essential plant nutrients in a liquid, organically complex form that is automatically applied to the entire landscape and soil with each watering. When applied through your irrigation system, Biofeed liquid-organic based fertilizers percolate down to the root zone faster, making them far more effective than liquid synthetic or granular fertilizers can ever be. Plus they neutralize salts and excessive mineral build-up to allow better water absorption and rooting of your valuable trees, plants, flowers and lawns!

Biofeed fertilizers differ from chemical additives in that they focus on the long-range nutritional needs of both the plant and soil.
