November 11, 2009

To Whom It May Concern:

We first tested [Aero™](#) in a bottle to see if it abated the smell of manure in our test sample of manure water. It worked exceptionally well.

Liking what we saw, or rather didn't smell, we began using Biofeed's Aero™ on a large-scale basis back in May of this year when we installed an injector to apply the product to our manure water. Our Aero™ usage is approximately 55 gallons per week.

Prior to using Aero™, we received numerous calls with regards to odor. Since we've used the product, those calls have all but gone away.

Sincerely,

A handwritten signature in black ink that reads 'Paul Rovey'.

Paul Rovey
