Results of Using OXY-POND® in Shrimp Ponds
Andhra Pradesh, India

“I am Mr. Jignesh U. Contractor, I own Vaishnavi Aquatech, We have been using Biofeed [OXY-POND®](#) since March 2017.

Nowadays the biggest problem in shrimp farming is running [high] mortality but, after using OXY-POND® as per protocol of only 2-Liters per hectare we didn't face this problem.

Of course, seed selection [is] also very important but we tried so many products and I can tell you in Asian condition we find OXY-POND® is the best.

After harvest we didn't find any black soil at [the] bottom of [the] pond so we can see it works very well. . . . I shared [my] results [with] one farmer who lost heavily in [his] first crop with poor Feed Conversion Rate (FCR) and [his] pond bottom [was] also not good in that case, it was full of anaerobic sludge, dead and rotting shrimp and feces.

In his second crop he used only OXY-POND® and he had [a] profitable harvest with less cost of production. He can see it works well. He made good money on his crop!

In our running crop we use OXY-POND® for soil treatment in [the] majority of our ponds. Now [the] bloom is very stable and growth [is] also good.”
