

A Biologist Uses OXY-POND® in Shrimp Ponds in Tumbes, Peru

SHRIMP FARM LARVAE LOSSES

A Peruvian shrimp farm manager near Tumbes Peru had been experiencing severe losses of 30% or more of his shrimp larvae year after year due to poor water quality. This severely reduced his potential profits.

LOWER LARVAE LOSSES

Enrique del Solar in Tumbes, Perú had just purchased \$35,000 worth of larvae. He informed his Biofeed representative, “Without your ([OXY-POND®](#)) product I would lose 30% of the larvae. With your product I lose only about 8%. So you saved me at least \$9,000.00.”

Enrique continues to compile production data and expects greater profits based on the good water quality and shrimp health he is observing. We have a happy, very loyal customer who is “spreading the word” in our behalf. Everyone comes to you with every conceivable problem, It is good to hear about a customer who is consistently happy!

OXY-POND® HELPS EVERY SHRIMP FARM

OXY-POND® is a formulation of concentrated organic water stabilizers and Oxygen Releasing Enzymes specially blended to help buffer pH and protect tender young fish and shrimp hatchlings during the pre-pond hatchery stage. OXY-POND® also helps to build disease resistance and hasten earlier maturity. OXY-POND® is designed to maintain more balanced biological growth and may be used with probiotics to improve productivity, if desired.

BENEFITS

- Releases elemental oxygen and reduced disease-causing bacteria help extremely sensitive shrimp larvae and fish fry by improved water quality.
- Reduces sludge at the pond bottom which is the common source of anaerobic bioactivity and disease-causing bacteria.
- Increases oxygen levels, dissolves sludge and improves overall environment to reduce mortality rates.
- Maintaining adequate oxygen levels is vital to ensuring a healthy grow-out cycle.

Oxygenate Your Pond!
