IMPROVE YIELDS & PROFITS!

OXY-LINE™ Prebiotics with the O₂ Advantage

OXY-POND™ is a rich source of specialized Oxygen Releasing Enzymes that release oxygen into the water! This action complements paddle wheel or mechanical aeration systems to ensure adequate oxygen levels for growing healthier fish and shrimp and maintaining *aerobic* bio-systems to digest unwanted sludge and reduce disease occurrence.

OXY-TERRA™ is a pond-bottom pretreatment formula that contains a concentrated blend of organic acids, enzymes and bio-nutrients designed to stimulate and feed *aerobic* bacteria in the pond bottom soil. Provides energy required by *aerobic* bacteria to break down and digest sludge, proteins, fecal coliform and fascias. Helps reduce or eliminate the growth of unwanted E-coli.

- ✓ Aids Stress Reduction & Health
- ✓ Better Feed Conversion Rate (FCR)
- ✓ Aids Earlier Maturation in the Hatchery Stage
- ✓ Enzymatically Aids Digestion
- ✓ Faster Break-Down

Improve Growth - Reduce St

OXY-LINE™ — an Invest

Increase Dissolved Oxygen Levels

OXY-HATCH™ is a formulation of concentrated organic water stabilizers and Oxygen Releasing Enzymes specially blended to protect tender young fish and shrimp hatchlings during the pre-pond hatchery stage. Also helps to build disease resistance and hasten earlier maturity.

- ✓ Promotes Uniform Growth
- ✓ Reduces Mortality Rate
- ✓ Greater Inhibition of Pathogens & Disease
- ✓ Reduces Pond Transfer Shock

of Pond Bottom Sludge

atment in Pond Success!

Aquatic scientists agree that the toxicity found in most ponds stems from a lack of oxygen. Ponds lacking adequate oxygen are known as *anaerobic*, while ponds with adequate oxygen are referred to as *aerobic*. Bad odors and ammonia are the first indicators that the pond is *anaerobic* or sick. Therefore, many aqua-farmers mechanically aerate their ponds, often 24 hours a day using pumps or paddles that stir air into the water... but this practice is very costly and may not fully solve the problem!

When using **OXY-LINE™**, oxygen levels rise and *anaerobic* conditions usually disappear within days, sludge begins to break-down faster and feed efficiency improves as

overall water quality improves. Also, your ponds biological activity will begin to become more conducive to fish and shrimp health.

Numerous trials and university studies have proven the effectiveness of **OXY-LINE™** products in a variety of ponds.

OXY-LINE™ brings a new approach to improving soil and water oxygenation. Our exciting HDH enzyme technology naturally releases elemental oxygen right into your soil and pond water! This action creates a more aerobic environment that helps your fish and shrimp grow healthier, faster and more disease-free!

2

OXY-LINE™ is a concentrated prebiotic and enzyme blend specifically designed for all phases of aquaculture pond management. **OXY-LINE™** consists of several carefully selected prebiotics and specialized HDH enzymes.

OXY-LINE™ liquid products are available in:

- 10 Liter Jugs (2 per Case)
- 20 Liter Pails
- 208 Liter Drums
- 1040 Liter Totes
- 1250 Liter Totes

*Use **OXY-POND™** with or without mechanical aeration to improve pond water quality.*
